(Unofficial) Sleeper League Page Template

Generate a custom league page for your Sleeper fantasy football league in just a few steps

`license MIT` `node >=14` `svelte 66.6%` `lines of code no longer available` `Forks 946`

`pull requests 8 open` `open issues 16`

[Live demo](#)

---

*If you and your league like League Page, please consider starring the repo and **donating** (and encouraging your league-mates to too!)*

For local developing npm:

```
npm install
npm run dev --
npm run dev -- --host (to test on other devices locally)
```

For local developing with a container

```
npm run docker-run
```

Features

- Up-to-date league information
- Easy to navigate trade and waiver history
- Awards and accolades
- Records and rankings for every season
- Current season power rankings
- Previous drafts and upcoming draft preview
- Season matchups
- Manager bio pages
- League constitution
- Helpful fantasy football resources and news

- Built using Svelte and SvelteKit
- Desktop, Mobile and PWA compatible
- League information generated from Sleeper API

Roadmap

- ☐ Add integration tests
- ☐ Cleanup repo
- ☑ ~~Test redraft leagues~~
- ☑ ~~Playoff matchups and current bracket~~
- ☐ Dynasty power rankings
- ☑ ~~Hyperlink all manager references~~
- ☑ ~~Fix all css issues when actively resizing the window~~

Some real-life League Pages

- Legends League

Setup your own League Page

If you've never touched a line of code, use the Training Wheels Guide instead

- Fork this repo
- Go to `/src/lib/utils/leagueInfo.js` and replace `your_league_id` (line 2) and `your_league_name` (line 3) with your Sleeper league ID and league name. (Optionally, also fill out the dues, and dynasty fields):

- Write your homepage text (league intro/bio) `/src/lib/utils/leagueInfo.js` (lines 9-14)

- Next, fill out and uncomment (delete the `//` at the beginning of each line) the managers' object (lines 27 - 92), also located in `/src/lib/utils/leagueInfo.js`, there should be one object for each manager. The structure may change in the future (it has already 😅). The source of truth is down at the bottom, lines 104-126 (for assistance, consult the Training Wheels guide).

```
{
    "roster": 4,  // ID of the roster that the manager manages
    "name": "Nick Melhado", // (optional) used if a manager took over a team, null or omit otherwise
    "location": "Brooklyn",
    "bio": "I grew up in New York City and know most of the people in the league from Southampton. I also went to high school with Andrew, Stef, and Rory and wen
    "photo": "/managers/nick.jpg", // done
    "fantasyStart": 2014, // when did the manager start playing fantasy football
    "favoriteTeam": "nyj", // favorite NFL team, (follows convention: nyj, sea, mia, etc.) MUST BE LOWERCASE
    "mode": "Win Now", // 'Win Now' or 'Rebuild'
    "rival": {
        name: "Clayton", // Can be anything (usually your rival's name)
        link: 6, // manager array number within this array, or null to link back to all managers page
        image: "/managers/clayton.jpg", // either a specific manager photo or 'everyone' or 'question'
    },
    "favoritePlayer": 1426, // this corresponds to the Sleeper player ID (https://api.sleeper.app/v1/players/nfl)
    "valuePosition": "WR", // Favorite position (QB, WR, RB, TE, etc.)
    "rookieOrVets": "Rookies", // 'Rookies' or 'Vets'
    "philosophy": "Quality over quantity. The team policy is to trade depth for stars, and win on a knife's edge where a single injury can completely derail a se
    "tradingScale": 10, // 1 - 10
    "prefferedContact": "Text", // 'Text', 'WhatsApp', and 'Carrier Pigeon' are currently supplied in the template
},
```
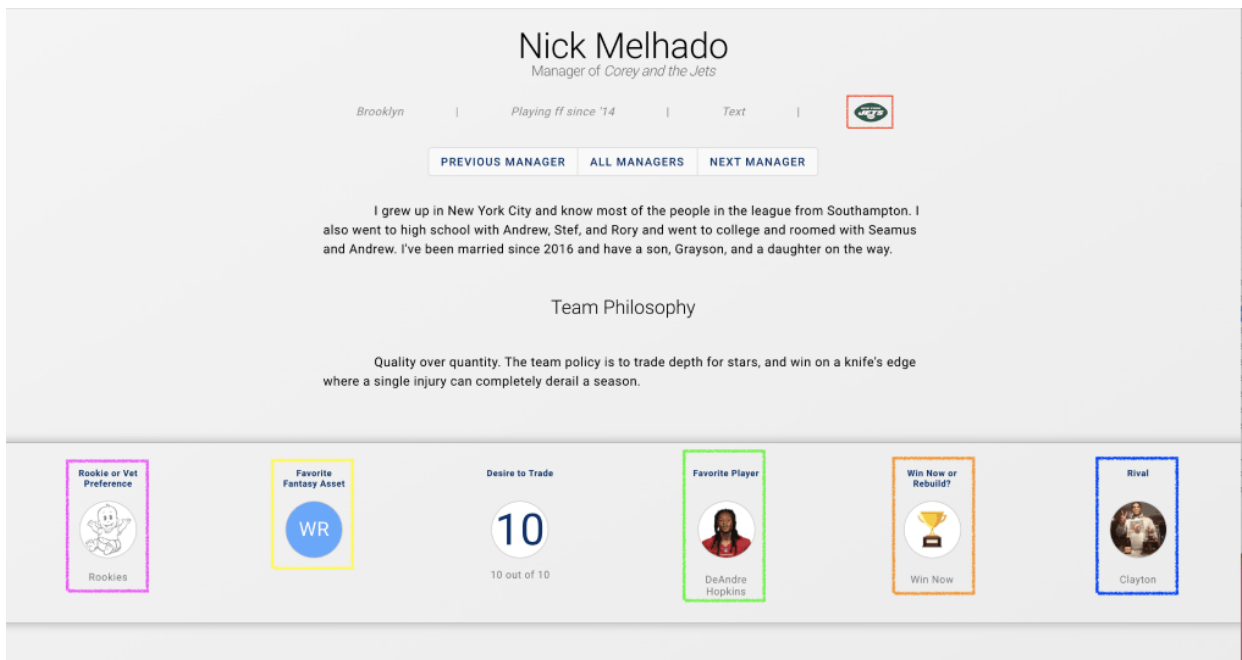

- Add corresponding images for managers to the `/static/managers/` directory and make the sure the name matches with what was provided above
- If you run into trouble adding managers, reference the Training Wheels' Manager section
- Add blog capabilities with contenful
    - Make a free contentful account
    - Click on `Content model` in the top bar and create Blog Post (id: `blog_post`) and Blog Comment (id: `blog_comment`) content models that matches the specs below **(All fields are required)**:
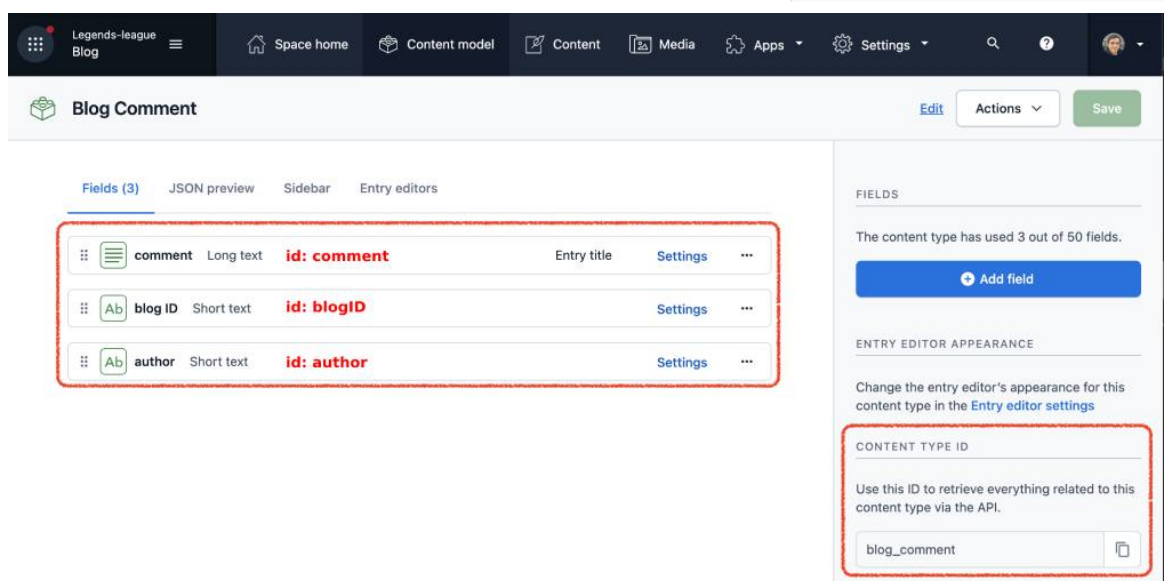

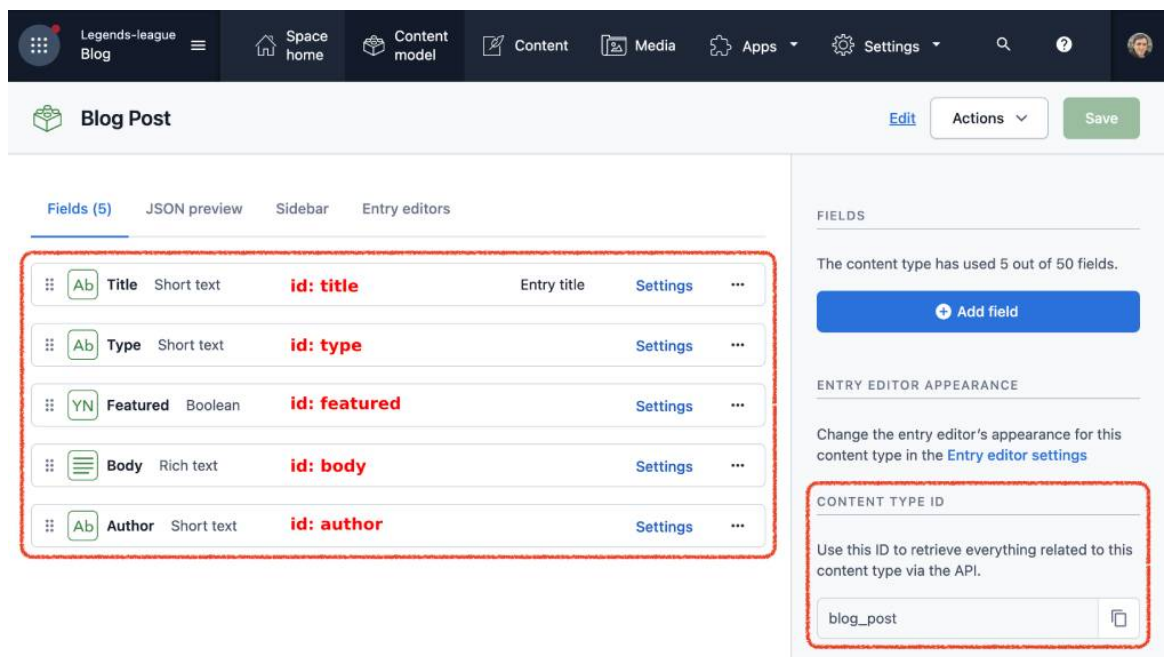

- Use sleeper your sleeper username for the author field when creating posts
  - Create a Content Management API key
  - For local development add a `.env` file to the root of your project and add the following variables
    - `VITE_CONTENTFUL_ACCESS_TOKEN` with the corresponding value obtained from contenful
    - `VITE_CONTENTFUL_SPACE` with your space ID, obtained from contenful
  - Create a Content Delivery / Preview API key
  - For local development add the following variable to your `.env` file
    - `VITE_CONTENTFUL_CLIENT_ACCESS_TOKEN` with the `Content Delivery API – access token` from contenful
  - To add the variables for production, go to your project settings and add the corresponding keys (using the same names as above) to the environment variables section
  - For more detailed instructions, follow the Training Wheels blog instructions
  - Finally, set `enableBlog` to true in `src/lib/utils/leagueInfo.js`
- Customize your league constitution `/src/routes/constitution/index.svelte` (remember to adjust the table of contents accordingly)

To deploy on Vercel for free:

- Push up your changes
- Link your github repo to Vercel
- That's it!

Add Fonte Unfiltered Post
